./DIRECT DIGITAL PRINT GUIDE

>DIRECT DIGITAL PRINTS

File Preparation Instructions

Our direct digital print service is for photographers and studios who wish to take charge of their digital files and control their own complete file preparation including sizing, cropping, borders and color calibration before printing.

Direct digital prints are printed on Glossy or Matte paper, and are available in sizes varying from 4x6 to 60x120.

Your files must be prepared to our exact specifications and saved in sRGB in order to streamline your workflow and ours as well as insuring consistent color accuracy.

Please note before proceeding:

All profiles assume an accurately calibrated and profiled monitor. The goal of printer profiles is to match your prints to your monitor. If the condition of your monitor is not known accurately, there is nothing to match the prints to. The viewing condition for the prints is also critical. Unless otherwise noted, our profile is built for print viewing under industry standard D50 (~5000°K) illumination.

Step by step file preparation:

1. **Size to desired print size at 300 dpi(EX:11"x14" @300 dpi)**
2. **Include any desired borders in file**
3. **Color space should be : sRGB, 8-bit with layers flattened**
4. **Convert file to printer profile**

You must *convert* to sRGB profile as the FINAL STEP BEFORE SAVING
IMPORTANT: Converting to profile must be your last step when prepping the file.

5. **Save files as Level 10 standard JPEG format**

JPEG compression is a very efficient image compression standard. You will not see a difference Between a Level 10 JPEG and a TIFF printed to photographic paper.

JPEG compression is perfect for transient files for sending to the lab for printing, but avoid using compression as a working file type. Also avoid opening a JPEG, making changes and resaving it again as a JPEG repeatedly. If your work flow calls for this to happen, save your files as TIFF or PSD files until they are complete and ready for output, at which time you should save them as a level 10 JPEG.

6. **Files must be organized in folders by print size and paper type**

Ex: "5x7 Glossy" or "8x10 Matte"

One print will be made from every file submitted unless quantity is specified on the folder

Ex: "3 of each 8x10 glossy"

7. **Save to CD or DVD or upload files to our FTP**
